How do I record video on motion detected events?

After the camera has been configured and set up on your network, you will use **TRENDnetVIEW Pro** to record motion detected video. Please install **TRENDnetVIEW Pro** from the CD.

After you install **TRENDnetVIEW Pro**, double click on the **TRENDnetVIEW Pro** shortcut on your desktop.

The **TRENDnetVIEW Pro** Software by default is configured to record at all times. To limit recording to motion detected events only, please do the following.

1. Right click **Video** then click the **Camera Setup Wizard**.

2. Select **Network Devices (IP Camera, Video Server)** under **Add New Devices** then click **Next**.

3. Label the device under **Device title** then click **Properties**.

4. Select **TRENDnet**, the model number of the camera then click **Ok**.

5. In **Access** Tab, fill in the camera settings and then click **OK**.

6. If you would like recording file included audio, click **Audio** tab on above screen, select **Internal Audio Source**, then click **OK.**

7. Click **Next.**

8. For motion detection select **Use motion detector for the stream being set up** then click **Properties**.

9. Click on the **Source** tab. Select **Software Motion Detection priority** and then click **OK**.

10. Click **Next**.

11. Select **Video**, Vi**deo Motion Information and Audio**, then click **Advanced Properties.**

12. Go to the **Motion and Events** tab. **Select Enable motion controlled recording** then set the pre-event and post-event recording times. Click **OK**.

13. Click **Next**.

14. Click **Next**.

15. Click **Finish**.

For other advanced features in **TRENDnetVIEW Pro** software, please refer to the **TRENDnetVIEW Pro** User's Guide on the CD.
