TRENDnet's Gigabit Web Smart Switch series offers advanced L2+ features with enhanced traffic management controls to meet the evolving demands of SMB networks. This rack mountable IPv6-ready managed switch comes with an intuitive web-based interface. Advanced managed switch features include LACP to group ports together to increase bandwidth between switches, VLANs for segmenting and isolating virtual LAN groups, QoS for traffic prioritization, port bandwidth controls, and SNMP monitoring, making this a powerful solution for SMB networks. Improve voice performance by isolating and prioritizing VoIP traffic from normal data traffic with the easy-to-use voice VLAN feature.

Free up router resources by offloading routing processes to the managed switch by using the L2+ IPv4/IPv6 static routing feature to efficiently route traffic at the switch level. The dynamic ARP inspection feature helps protect connected devices from man-in-the-middle attacks by discarding malicious and invalid ARP packets. Take advantage of the available multicast and IGMP/MLD snooping features to optimize IP surveillance system performance, and minimize network traffic. This TRENDnet Web Smart Managed Switch also feature 10G SFP+ slots to support long-distance fiber networking applications.
