1. Connect one end of the Network cable to one of the TEW-658BRM's LAN ports. Connect the other end of cable to the computer's Ethernet port.

2. Connect one end of the RJ-11 telephone cable to the TEW-658BRM's ADSL port. Connect the other end of the cable to the phone jack.

3. Connect the Power Adapter to the TEW-658BRM and then to a power outlet. Push the power button to the "On" position. Wait for about 20 seconds.

4. Verify that the following panel lights are on: **Power (Green)**, **LAN 1~4 (Green)** (port your computer is connected to), **Wireless (Green)** and **DSL (Green)**. Please see trouble shooting section for additional information on LED behaviors.

### 3. Configure the Modem

**Note:** It is recommended that you configure the Modem from a wired computer.

1. Open your web browser, type `http://192.168.10.1` in the Address bar, and then press **Enter**.

2. Enter the User Name and password and then click **OK**. By default:

User name: **admin**

Password: **admin**

Note: User name and Password are case sensitive.

3. The Setup wizard will automatically appear. Click **Setup Wizard** if the Setup Wizard does not automatically appear.

4. Select **PVCO** and click **Next**.

- Configure the settings based on information provided by your ISP. Then Click **Next**.

**Note:** In the example below, the ADSL connection type is PPPoE.

- Select the desired ADSL connection type and then click **Next**.

- Configure the settings based on information provided by your ISP. Then click Next. In most cases for PPPoE connection method, you need to configure the following and typically the remaining default settings should be fine.  
User Name  
User Password  
Mac Address (Clone Mac)

If Static is selected for IPMode of Connection you would need to configure the following:

**IP address:** The assigned IP address should match your network. This IP address should not be used by any other network device on your network.

**Subnet Mask:** In most cases, the default Subnet Mask (255.255.255.0) should be fine.

**Note:**

- For Connection Trigger, select Continuous to keep the Internet connection always on.
- Idle Disconnect allows you to configure an auto-disconnect time in seconds (30-3600). The TEW-658BRM will automatically disconnect from the Internet if no Internet activity has been detected within the period of Idle Disconnect entered.

8. Configure the following for **Wireless Basic Setting** and then click **Next**.

**Device:** check Enable. Select Disable if you do not want any wireless computers or device to connect to this device.

**SSID:** The SSID is the wireless network name of your wireless network (e.g. wireless router or access point). Enter a unique SSID (Network Name). Do not use anything that would be identifying like "Smith Family Network". Choose something that you would easily identify when searching for available wireless networks.

**Wireless Channel:** In most cases, the default channel is fine.

**Wireless Mode:** In most cases, the default mode is fine.

**Note:**

1. To protect your network from any unauthorized access it is recommended to enable wireless encryption.
2. Once encryption is enabled on the router, each wireless computer and device must be configured with the same encryption key.
3. The example below is for WPA2-PSK security. If you select WPA-PSK or WPA2-PSK, make sure your wireless adapters support WPA or WPA2. If your wireless adapters do not support WPA or WPA2, then select WEP.

9. Configure the following for security configuration:

**Security Mode:** WPA2

**Authentication Type:** PSK

**Encryption Type:** AES

**Group Rekey Time:** In most cases, the default time is fine.

**Confirmed Passphrase:** Enter an encryption key. For Example: trendnet

Then click **Next**. For WPA-PSK or WPA2-PSK, the Pre-Shared Key must be between 8 and 63 ASCII or 64 HEX characters. Make sure to copy down the encryption key.

10. Click **OK**.

11. Click **Reboot**.

12. Click **OK**.

13. Click **OK**.

14. Please wait while the TEW-658BRM reboots.

15. Click Finish.

16. Verify that the following panel lights are on:  
DSL(Green) and Internet (Green).

17. Open up your browser and enter in a URL  
(e.g. [www.trendnet.com](http://www.trendnet.com)) to verify that you  
have Internet connection.

If you still encounter problems or have any questions regarding the **TEW-658BRM**, please contact TRENDnet's Technical Support Department.

The following are some general wireless tips to help minimize the impact of interference within an environment.

## **Assign your network a unique SSID**

Do not use anything that would be identifying like “Smith Family Network”. Choose something that you would easily identify when searching for available wireless networks.

## **Do not turn off the SSID broadcast**

The SSID broadcast is intended to be on and turning it off can cause connectivity issues. The preferred method of securing a wireless network is to choose a strong form of encryption with a strong and varied encryption key.

**Note: after setting up the SSID, encryption type and encryption key/passphrase, please make a note of them for future reference. You will need this information to connect your wireless computers to the wireless router/access point.**

## **Change the channel**

Most wireless access points and routers are defaulted to channel 6. If you have a site survey tool that will display the channels you can plan your channel selection around neighboring access points to minimize interference from them. If your site survey tool does not display the channel try using channels 1 or 11.

## **Change the channel bandwidth**

If you are using 802.11n you should be securing the network with WPA2-AES security.

**Note: Due to Wi-Fi certification considerations if you choose WEP, WPA or WPA2-TKIP encryption this device may operate in legacy wireless mode (802.11b/g). You may not get 802.11n performance as these forms of encryption are not supported by the 802.11n specification.**

## **Avoid stacking hardware on top of each other to prevent overheating issues**

Maintain enough free space around the hardware for good ventilation and airflow. There should also be plenty of free space around the antennas to allow the wireless signal to propagate. Please also make sure that the wireless hardware is not placed in any type of shelving or enclosures.

## **There are a number of other environmental factors that can impact the range of wireless devices.**

1. Adjust your wireless devices so that the signal is traveling in a straight path, rather than at an angle. The more material the signal has to pass through the more signal you will lose.
2. Keep the number of obstructions to a minimum. Each obstruction can reduce the range of a wireless device. Position the wireless devices in a manner that will minimize the amount of obstructions between them.

3. Building materials can have a large impact on your wireless signal. In an indoor environment, try to position the wireless devices so that the signal passes through less dense material such as dry wall. Dense materials like metal, solid wood, glass or even furniture may block or degrade the signal.
4. Antenna orientation can also have a large impact on your wireless signal. Use the wireless adapter's site survey tool to determine the best antenna orientation for your wireless devices.
5. Interference from devices that produce RF (radio frequency) noise can also impact your signal. Position your wireless devices away from anything that generates RF noise, such as microwaves, HAM radios, Walkie-Talkies and baby monitors.
6. Any device operating on the 2.4GHz frequency will cause interference. Devices such as 2.4GHz cordless phones or other wireless remotes operating on the 2.4GHz frequency can potentially drop the wireless signal. Although the phone may not be in use, the base can still transmit wireless signals. Move the phone's base station as far away as possible from your wireless devices.

If you are still experiencing low or no signal consider repositioning the wireless devices or installing additional access points. The use of higher gain antennas may also provide the necessary coverage depending on the environment.
