

N600 Dual Band Wireless Access Point TEW-670AP(V1.0R)

The N600 Dual Band Wireless Access Point provides high performance wireless n speed, coverage, and managed controls.

Concurrent Dual Band technology creates two separate wireless n networks at the same time—one on the 2.4GHz frequency and the other on the less congested 5GHz frequency. Assign high bandwidth clients to the uncongested 5GHz frequency and low bandwidth clients to the more common 2.4GHz frequency.

Multiple Input Multiple Output (MIMO) antenna technology reduces wireless dead spots. Wi-Fi Protected Setup (WPS) integrates other WPS supported devices at the touch of a button. Advanced features include 4 SSIDs per wireless band, access filters for each SSID, WMM Quality of Service data prioritization, WPA2-RADIUS encryption, and real-time bandwidth monitoring for each wireless band.
