

## Firmware Upgrade Procedure

1. Save the unzipped firmware file to your PC
2. Login to router's configuration page (default IP is [192.168.10.1](http://192.168.10.1))
3. Click on the **Maintenance** section in the left hand panel and select the **FW Upgrade** option

The screenshot shows a web interface titled "FIRMWARE UPGRADE". At the top, there is a section labeled "Firmware Filename" with an empty text input field and a "Browse..." button to its right. Below this, it states "Current firmware version is **1.00.09**". A note follows: "Note! Do not interrupt the process or power off the unit when it is being upgraded." Below the note, it says "When the process is done successfully, the unit will be restarted automatically." At the bottom of the interface, there are two buttons: "Upgrade" and "Cancel".

4. Click **Browse** and select the unzipped firmware file.
5. Click the **Upgrade** button.
6. Wait until the firmware upload completed and the device reboot

**Important!** Do not turn off the device or press the reset button while this procedure is in progress.
