2. Installation du matériel

Le TFU-430 est connectable à chaud, vous pouvez donc le brancher ou le débrancher alors que l'ordinateur est allumé. En outre, le TFU-430 est alimenté par bus et ne nécessite donc pas de transformateur. Cependant, si vous utilisez des périphériques USB ou FireWire à grande vitesse, il est préférable d'utiliser le transformateur externe fourni.

1. Allumez votre ordinateur et attendez qu'il soit complètement démarré.

2. Branchez le cordon d'alimentation à l'adaptateur de courant alternatif.

3. Branchez l'adaptateur secteur AC au Hub USB.

4. Branchez l'extrémité B du câble USB fourni au **port UP**.

5. Branchez le câble FireWire IEEE 1394 fourni au TFU-430.

Remarque

1. U1, U2, U3 et U4 sont des ports USB descendants. Ne branchez pas un câble USB entre votre ordinateur et les ports USB descendants
2. L'un des ports Firewire IEEE 1394 doit être relié à votre ordinateur en tant que port montant. N'importe quel port Firewire IEEE 1394 peut servir de port montant.

6. Branchez l'autre extrémité du câble USB (Type A) fourni à votre ordinateur.

7. Branchez l'autre extrémité du câble Firewire fourni à votre ordinateur.

8. Connectez les périphériques USB et FireWire aux ports restants.

L'installation est maintenant complète.
